INSIDE THE GUIDE

Evidence Bound AI Project Kit

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Define the decision boundary

Specify the requested outcome, prohibited outcomes, people affected, systems affected, and the exact point where human authorization is required.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Separate knowledge from permission

Record what is known independently from what is permitted to do. Possessing information does not create a liability.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Control evidence and provenance

Tie every consequential claim to a source, artifact, test, observation, or explicitly identified report. Preserve who supplied it and when.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Control action and effect

Distinguish a recommendation, attempted action, confirmed submission, observed effect, and verified outcome.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Handle uncertainty and contradiction

Keep conflicts visible. Do not erase a contradiction by selecting the preferred answer without a documented resolution basis.

Evidence Bound AI Project Kit | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Project intake

Done	Requirement	Evidence or exception
☐	The requested outcome is stated in observable terms.	
☐	The affected people systems and environments are identified.	
☐	Prohibited actions are explicit.	
☐	The acceptance authority is named.	
☐	Evidence needed for completion is defined.	
☐	External writers and communications are separately authorized.	
☐	Sensitive or proprietary information boundaries are recorded.	
☐	Rollback or recovery requirements are known.	

Action authorization gate

Done	Requirement	Evidence or exception
☐	The acceptance authority is named.	
☐	The requested action is within scope.	
☐	The target is exact and unambiguous.	
☐	The evidence supports the action.	
☐	The actor has current authority.	
☐	The actor has the required capability and access.	
☐	Material uncertainty and contradictions are visible.	
☐	The expected effect and failure modes are recorded.	
☐	The action is reversible or the irreversible consequence is approved.	
☐	The verification method is ready.	

Completion gate

Done	Requirement	Evidence or exception
☐	Every acceptance criterion has a corresponding observation.	
☐	Attempted actions are not mislabeled as completed effects.	
☐	The final artifact or external state is

6-LESSON MINI-COURSE

WORKING CHECKLIST

Lesson sequence: Define the decision boundary, Separate knowledge from permission, Control evidence and provenance, Control action and effect, Handle uncertainty and contradiction, Close with verification.

INSIDE THE GUIDE

Technical Release Readiness Kit

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Identify exact bytes

Bind the release record to version identifiers, filenames, hashes, build inputs, and retained artifacts.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Design acceptance evidence

Connect each requirement to a test method, expected results, test inputs, evidence location, and reviewer.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Prove reproducibility

Use a clean environment or independent operator to confirm the package can be installed or run from the documented instructions.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Preserve known gaps

Record missing source commits, unavailable raw logs, operator-reported attestations, untested environments, and deferred risks.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Separate approvals

Track technical, security, legal, commercial, founder, and distribution approval as different gates.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Technical Release Readiness Kit | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Artifact freeze

Done	Requirement	Evidence or exception
☐	Release filename is final.	
☐	Version is embedded or recorded.	
☐	Source revision is recorded or explicitly unavailable.	
☐	Build environment is recorded.	
☐	Manifest matches package contents.	
☐	Every file hash is calculated after final packaging.	
☐	The package remained stable during hashing.	
☐	The retained copy matches the delivery copy.	

Acceptance execution

Done	Requirement	Evidence or exception
☐	Test cases are defined and recorded.	
☐	Test results are recorded and a record of test inputs is retained.	
☐	Expected results are retained.	
☐	Expected results were defined before execution.	
☐	Observed results are recorded without interpretation drift.	
☐	Evidence files are linked.	
☐	Failures and blocked tests remain visible.	
☐	Retests have separate execution identifiers.	

Distribution gate

Done	Requirement	Evidence or exception
☐	Technical reviewer approval is recorded.	
☐	Security review state is recorded.	
☐	Legal review state is recorded.	
☐	Commercial approval is recorded.	
☐	Founder or executive approval is recorded.	
☐	Recipient and permitted use are exact.	
☐	Support limits are included.	

Technical Release Readiness Kit | Page 5

6-LESSON MINI-COURSE

WORKING CHECKLIST

Lesson sequence: Identify exact bytes, Design acceptance evidence, Prove reproducibility, Preserve known gaps, Separate approvals, Package the handoff.

INSIDE THE GUIDE

Solo Founder AI Development System

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Protect founder intent

Create a canonical intent record containing invariants, required outcomes, prohibited reductions, and unresolved questions.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Convert intent into architecture

Separate the enduring system model from components, interfaces, vendors, and demonstration examples.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Build bounded slices

Give the AI one coherent outcome with explicit files, tests, non-goals, evidence, and stopping conditions.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Review generated work

Require exact changed files, executed tests, observed results, remaining failures, and claims the AI could not verify.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Preserve continuity

Use structured transition records containing decisions, evidence, current state, blockers, permissions, and exact resume actions.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Solo Founder AI Development System | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Before giving AI a task

Done	Requirement	Evidence or exception
☐	The objective is one observable outcome.	
☐	Current state is included.	
☐	Exact files or systems are identified.	
☐	Allowed actions are explicit.	
☐	Forbidden actions are explicit.	
☐	Required tests are named.	
☐	Evidence required for acceptance is named.	
☐	The AI must report limitations and blocked access.	
☐	External writes are separately authorized.	

Before accepting the result

Done	Requirement	Evidence or exception
☐	All claims are supported by evidence.	
☐	Exact files or systems are identified.	
☐	Required tests are named.	
☐	The scope matches the claim.	
☐	The result was observed in the target environment.	
☐	Known failures remain documented.	
☐	No placeholder or fabricated evidence remains.	
☐	Founder intent was not reduced.	
☐	The transition record is current.	

Weekly founder review

Done	Requirement	Evidence or exception
☐	Current commercial objective is still valid.	
☐	Work completed this week has retained evidence.	
☐	Unproven assumptions are visible.	
☐	Customer-independent development remains reversible.	
☐	Legal and ownership questions are not treated as resolved.	

Solo Founder AI Development System | Page 5

6-LESSON MINI-COURSE

WORKING CHECKLIST

Lesson sequence: Protect founder intent, Convert intent into architecture, Build bounded slices, Review generated work, Preserve continuity, Control commercialization.

INSIDE THE GUIDE

Hardware Software Bench Validation Kit

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Bound the bench

Define what is connected, what remains isolated, maximum energy, prohibited loads, and emergency stop conditions.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Verify before energizing

Confirm part identity, pinout source, voltage, current, polarity, voltage termination, and continuity.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Establish safe state

Document the de-energized and commanded-safe behavior before testing nominal operation.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Observe without controlling

Use passive or silent observation first when practical and confirm the selected interface and mode.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Execute controlled tests

Change one variable at a time, record exact firmware and configuration, and preserve raw observations.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Hardware Software Bench Validation Kit | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Pre-energization

Done	Requirement	Evidence or exception
☐	Test boundary is approved.	
☐	No vehicle or production equipment is unintentionally connected.	
☐	Part numbers and revisions are recorded.	
☐	Pinout sources are retained.	
☐	Voltage domains are compatible.	
☐	Polarity and grounds are verified.	
☐	Termination is correct.	
☐	Protection and current limits are set.	
☐	Emergency stop method is available.	
☐	Expected safe state is defined.	

Execution

Done	Requirement	Evidence or exception
☐	Test boundary is approved.	
☐	No vehicle or production equipment is unintentionally connected.	
☐	Part numbers and revisions are recorded.	
☐	Pinout sources are retained.	
☐	Voltage domains are compatible.	
☐	Polarity and grounds are verified.	
☐	Termination is correct.	
☐	Protection and current limits are set.	
☐	Emergency stop method is available.	
☐	Expected safe state is defined.	

Closeout

Done	Requirement	Evidence or exception
☐	Outputs returned to safe state.	
☐	Power removed.	
☐	Stored energy discharged where applicable.	
☐	Logs and photos are retained.	
☐	Final configuration is recorded.	
☐	Anomalies are listed.	

Hardware Software Bench Validation Kit | Page 5

6-LESSON MINI-COURSE

WORKING CHECKLIST

Lesson sequence: Bound the bench, Verify before energizing, Establish safe state, Observe without controlling, Execute controlled tests, State the proof boundary.

INSIDE THE GUIDE

Maintenance and Operations Leader Toolkit

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Establish the operating picture

Know equipment status, open work, parts constraints, people available, safety issues, and the next decision.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Control work orders

Require clear symptoms, asset identity, priority, history, ownership, status, and closure evidence.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Control parts

Separate on-hand quantity, reserved quantity, serviceable condition, reorder state, and shortage effect.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Run useful handoffs

Transfer changes, open risks, decisions, and the next required action rather than repeating the entire shift.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Use root-cause analysis

Contain the immediate issue, establish evidence, test causes, assign corrective action, and verify recurrence control.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Maintenance and Operations Leader Toolkit | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Start of shift

Done	Requirement	Evidence or exception
☐	Safety events and restrictions reviewed.	
☐	Required equipment and current status confirmed.	
☐	New failures identified.	
☐	Open critical work assigned.	
☐	Parts shortages tied to affected work.	
☐	Staffing and qualifications match assigned work.	
☐	External support or access needs escalated.	
☐	Next status review time established.	

Work-order closure

Done	Requirement	Evidence or exception
☐	Complete work order identified.	
☐	Work order history reviewed.	
☐	Work order status confirmed.	
☐	Configuration changes are recorded.	
☐	Functional check is complete.	
☐	Remaining limitations are visible.	
☐	Return-to-service authority is recorded.	

Corrective action

Done	Requirement	Evidence or exception
☐	Immediate hazard or disruption contained.	
☐	Evidence preserved.	
☐	Problem statement is observable.	
☐	Candidate causes were tested.	
☐	Root cause is supported.	
☐	Corrective action has an owner and date.	
☐	Implementation is verified.	
☐	Recurrence review is scheduled.	

Maintenance and Operations Leader Toolkit | Page 5

6-LESSON MINI-COURSE

WORKING CHECKLIST

Lesson sequence: Establish the operating picture, Control work orders, Control parts, Run useful handoffs, Use root-cause analysis, Develop people.

INSIDE THE GUIDE

Motorcycle Build Decision Workbook

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Define intended use

Record how the motorcycle is actually ridden before selecting parts or power targets.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Capture the baseline

Document the current engine, intake, fuel, exhaust, valve train, drive train, chassis, braking, electrical, and tire configuration.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Map dependencies

Identify supporting modifications, calibration needs, compatibility evidence, installation constraints, and effects on other systems.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Control the budget

Separate part cost, supporting parts, labor, calibration, consumables, shipping, tax, and contingency.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Change deliberately

Use stages that preserve a known configuration and avoid changing several unknowns without a plan.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Motorcycle Build Decision Workbook | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Before buying a part

Done	Requirement	Evidence or exception
☐	The intended improvement is specific.	
☐	Current configuration is recorded.	
☐	Exact part number is known.	
☐	Filament evidence matches year and model.	
☐	Required supporting parts are identified.	
☐	Calibration requirement is known.	
☐	Installation capability is confirmed.	
☐	Warranty and legal implications were checked.	
☐	Verification method is defined.	
☐	Total installed cost fits the budget.	

Before the first ride

Done	Requirement	Evidence or exception
☐	Parts and versions recorded.	
☐	Calibration identity recorded.	
☐	Fault codes checked.	
☐	Leaks heat and unusual noise checked.	
☐	Drivability observations recorded.	
☐	Fuel and conditions recorded.	

After each stage

Done	Requirement	Evidence or exception
☐	Installed parts and versions recorded.	
☐	Calibration identity recorded.	
☐	Fault codes checked.	
☐	Leaks heat and unusual noise checked.	
☐	Drivability observations recorded.	
☐	Fuel and conditions recorded.

INSIDE THE GUIDE

Amputee Return to Riding Field Guide

Actual pages from the paid guide, reduced and marked PREVIEW.

ELQAVREN KNOWLEDGE SYSTEMS

How to use this product

1. Read the operating guide once before completing the forms.
2. Create a new copy of the editable workbook or forms for each project, asset, build, or decision.
3. Enter unknown when information is unavailable. Do not convert missing information into a confident answer.
4. Attach or reference the evidence that supports consequential entries.
5. Run the applicable checklist before approval, action, release, or progression to the next stage.
6. Keep the completed record with the artifacts, logs, photographs, receipts, or correspondence it references.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Define the personal objective

Clarify why returning matters, the kind of riding desired, and what a successful first stage means.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Build the support team

Coordinate questions across medical, prosthetic, motor vehicle, and family perspectives without asking one professional to answer outside their area.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Study the rider motorcycle interface

Examine mounting, dismounting, balance, controls, stops, parking, terrain, heat, pressure, sweat, and fatigue.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Progress in bounded stages

Move from static observation to controlled practice only when the previous stage is acceptable to the responsible people.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Use stop conditions

Decide in advance which pain, skin, fit, control, fatigue, weather, or motorcycle conditions end a session.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Amputee Return to Riding Field Guide | Page 2

ELQAVREN KNOWLEDGE SYSTEMS

Working checklists

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Questions for the support team

Done	Requirement	Evidence or exception
☐	Clinical restrictions and warning signs are understood.	
☐	Medication effects relevant to riding were discussed.	
☐	Prosthetic component limits were discussed.	
☐	Socket pressure and skin plan established.	
☐	Mounting and control demands reviewed.	
☐	Motorcycle inspection completed by the responsible person.	
☐	Training support identified.	
☐	Emergency and transportation plan established.	

Before a session

Done	Requirement	Evidence or exception
☐	Weather forecast is understood.	
☐	The planned stage is specific.	
☐	Location and weather fit the stage.	
☐	Motorcycle condition is acceptable.	
☐	Prosthesis and suspension are checked.	
☐	Communication and support are available.	
☐	Stop conditions are agreed.	
☐	A way home exists if the session ends early.	

After a session

Done	Requirement	Evidence or exception
☐	Skin and limb observations recorded.	
☐	Pain discomfort heat and sweat recorded.	
☐	Socket security recorded.	
☐	Control and balance difficulty recorded.	
☐	Fatigue onset recorded.	
☐	Motorcycle issues recorded.

Mini course

Complete the six lessons in order. Each lesson includes an application exercise. Use a real but non-sensitive project when possible.

Lesson 1 Translate work into capabilities

Convert military titles and tasks into civilian problems solved, scale, tools, decisions, and measurable outcomes.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 2 Identify a credible founder lane

Choose a problem where lived experience, expertise, interest, and founder pain overlap without overstating credentials.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 3 Build with controlled AI assistance

Use AI to accelerate research, documentation, prototyping, and testing while retaining human authority and evidence.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 4 Create proof before claims

Build a demonstration, test record, work sample, or bounded evaluation that shows what exists and what remains unproven.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Lesson 5 Separate the workstreams

Track product, customer, company, ownership, legal, finance, benefits, and personal capacity separately.

Application exercise Apply this lesson to one current situation. Record the result in the corresponding form and identify one unresolved fact or decision.

Mark an item complete only when the condition is observable or supported by an identified record. Record exceptions beside the item or in the associated workbook.

Experience translation

Done	Requirement	Evidence or exception
☐	Military title translated into civilian function.	
☐	Operating scale recorded.	
☐	Tools and systems identified without restricted detail.	
☐	Problem solved is specific.	
☐	Personal responsibility is separated from team responsibility.	
☐	Result is measurable where evidence exists.	
☐	Transferable capability is stated plainly.	
☐	Unverified clearance or certification claims are excluded.	

Venture readiness

Done	Requirement	Evidence or exception
☐	Problem is clearly defined.	
☐	Problem has a credible relationship to the problem.	
☐	Solution can be demonstrated safely.	
☐	Evidence boundary is defined.	
☐	Proprietary and third-party information is protected.	
☐	Legal and ownership questions are tracked.	
☐	First offer is bounded.	
☐	Personal workload and support limits are realistic.	

Ninety-day plan

Done	Requirement	Evidence or exception
☐	One buyer group selected.	
☐	One problem statement written.	
☐	One demonstration or work sample selected.	
☐	One paid evaluation offer drafted.	
☐	Formation and ownership questions
